Additional requirements

1. Rebates are available for NEW commercial equipment only. Used or refurbished equipment does not apply.
2. Incentive is for adding variable speed fan controls to the exhaust fan motor serving the kitchen vent hoods, usually accomplished by adding a variable frequency drive (VFD) to the motor with temperature and/or grease sensors to determine the needed exhaust fan speed. Additionally, the makeup air unit (MAU) supply fan speed may need to be interlocked to be controlled as well. The incentive is the same whether or not the MAU is controlled, but the energy savings will be higher if the MAU is controlled as well. Incentive is per controlled horsepower. So, instead of entering the number of controlled fans/motors, enter the total controlled horsepower.
